

1. Update since last meeting

- ICPWS Conference - information has been circulated via mailing list and Facebook
- Colleagues from abroad has been invited to join the Facebook group SIAPWS (Open) and several has joined. (forgot to mention this in the meeting).

2. EC Action list

SIAPWS website

- SIAPWS website registered - siapws.org and siapws.com and siapws.dk. Maja and Karsten will test the Wordpress system out to learn how to produce the web-pages.

Cooperation with Matarvattensektionen

- At the last EC meeting in Matarvattensektionen, there was a long discussion and many questions on the new model of cooperation. Especially, the extra fee and the payment from the different countries were in focus. The change of procedures and fee has to be decided on the next annual meeting, just like the SIAPWS procedure. Karsten proposes to be as proactive as possibly by trying to answer/give the SIAPWS view on the question raised. Roger and Niklas will make a list of questions/points to consider and send it to Monika for inclusion in these minutes [*Note 23.10.2018: these questions/points has not yet been sent to Monika*]. At next EC meeting, we will discuss and decide the answers, so that they are ready for the EC of Matarvattensektionen meeting at the end of Matarvattenkonferensen.

Budget

- Updated with the expectations for Finnish and Danish members - is circulated to the EC.

National groups

- Finnish list and information distribution are on track, but no date for a meeting has been decided yet. Danish contact list is ready, and an invitation for a meeting will be send out this week. The agenda will be like the annual meetings: First the stuff on SIAPWS, then some presentations (on flue gas condensate treatment, amine conditioning and district heating water) will be given, and the day ends with a visit to the new Bio-fired plant at Skærbækværket, near Fredericia.

Next newsletter

- Jere will write a case story concerning the project of converting Järvenpiluyu CHP to caustic conditioning.

3. SIAPWS online courses – status and next moves

- Basic and advanced water-chemistry is ready for announcement in next issue of Matarvattensektionens newsletter. It will also be announced via the mailing list and Facebook group.
- NOKN offers a course in the flue gas cleaning techniques - optimisation of FG cleaning with respect to condensate quality - should we go for that? NOKN is asked for an abstract of the course - if that's fine, he will go ahead.

4. Miscellaneous

- Jere is now in a team covering all plants operated by MaintPartner - he is the performance guy together with two others responsible for district heating and maintenance. "Performance" in Finnish can also mean "straightening things out", so Jere has great expectations.
- Maja is writing lab. procedures for the double-filter technique for the various methods for quantifications (TPTZ, Ferrozine, and ICP-OES). These will be circulated as soon as they are ready, and the hope is that she will be able to arrange a round robin in the fall.

5. Next EC meeting

- Monday 25/10 (13:00-14:00)
